for Welding, Cutting and
Semi-Automatic Processes

CARRIAGES

The BUG-O Systems Carriages are made of high-strength, lightweight aluminum alloy. The carriage wheels ride in opposed recessed grooves or ways, in the Aluminum Rigid Rails, locking the carriage to the rail in all positions. The pinion from the drive unit goes through the carriage and engages the rack on the rail, providing a positive drive. One set of wheels on each carriage is adjustable to allow for smooth accurate travel. The wheels contain permanently lubricated sealed bearings. All steel components are plated to resist corrosion.
